Objective
Participants gain intercultural competences to enhance their success in international scientific work.

Description
- Understanding the cultural dimension of diverse identities and its influence on work, communication and behavior in international scientific collaboration and teams
- Training awareness: the impact of key cultural dimensions (e.g. collectivism vs. individualism) and values on our work and ways of cooperating; understanding intercultural communication, avoiding misunderstandings
- Developing intercultural competences: the key to successful communication and cooperation in modern diverse work and science environments

Methodology
- Interactive, experience-based learning with individual, pair and small group exercises
- Group reflections and discussions
- Analyzing exemplary critical incidents
- Scientifically based input
- Practical exercises

Conditions
Openness to explore our cultural imprints and their influence on our behavior, interaction and communication.
